

Report and recover from hacking

I've been hacked. What should I do?

Even if you've taken steps to protect your devices and accounts, you can still be hacked. But it's not too late to recover and protect yourself or your business.

First, you should make a record of the key details of the incident. This includes what happened, when it happened, if someone contacted you, and how you responded.

These are things you can do to stop further access by the hacker:

- Disconnect from the internet.
- Scan for viruses to identify and remove any malware.
- Change all your passwords and passphrases.
- Notify your social network to be on the alert for any strange links or email attachments.

If someone has stolen sensitive data, you should contact these agencies to report it, get help, and reduce further harm.

Not sure if you've been hacked?

Use our [interactive tool](#) to learn what steps to take if you think you're a victim of cybercrime.

The [where to get help](#) page has general advice on recovering from viruses, scams and cyber attacks.

The [hotline](#) is full of expert staff who provide Australians with access to cyber security advice when they need it, 24 hours a day, 7 days a week.

Who should I contact?

ASD's ACSC ReportCyber

Report cybercrimes, security incidents and abuse through [ReportCyber](#). Your report helps to disrupt crime operations and makes Australia more secure. If your money and/or identity is at risk, also notify the relevant services below.

Your financial institution

Contact your bank or credit union immediately if your financial details were stolen. They may be able to freeze your accounts and credit cards, or stop a transaction.

IDCARE

Contact [IDCARE](#) if your information is at risk from a data breach. They're a national identity and cyber support service for individuals and organisations.

Australian Taxation Office

Contact the [ATO](#) if someone has stolen your personal or business identity. You must report all tax-related security issues to the ATO.

More information

So you think you've been hacked

Find out what to do if you think you're the victim of a cybercrime.

Report and recover from malware

If you've fallen victim to a malware attack, find out what to do and who to contact.

Antivirus software

The consequences of viruses, spyware and other malicious software can be serious and far reaching. Follow our guidance about using anti-virus software.

Spotting scams

Learn how to identify phishing messages to stay safe and protect your personal information.

Passphrases

Protect your accounts from cybercriminals with a secure password or passphrase.

Need more support?

For help with all types of threats, visit our [where to get help](#) page.

If you still need help, call our Australian Cyber Security Hotline on 1300 CYBER1 ([1300 292 371](#)).
